CURVED

**Curved Monitors Are Immersive.**

In the world of viewable media, immersion is a golden standard to work towards. If a product can make you forget, so to speak, that you're staring at a screen, then you're much more likely to enjoy the experience. To create this sense of immersion,

products must be engineered in a way that replicates real life. The monitor technology specifically used in this case is called ocular perception. This is something everyone learns from an early age.
